XL Actuators

Complete solutions from HYTORK

**The highest quality,
most economical
actuator anywhere!**

**This unique combination
of high quality, modular
actuator design,
unique features,
customer benefits and
economical cost has
been achieved by
substantial engineering
and financial investment
by HYTORK.**

HYTORK has been manufacturing actuators for over 26 years and, through continuous improvement resulting from valuable input from our customers, has developed the XL range of actuators.

These heavy duty actuators have a proven track record of reliable operation in both industrial and commercial applications.

The XL actuator is modular in design, allowing many different functional features to be assembled from a series of modules at the factory or on site.

All XL actuators are field convertible from double acting to spring return (or vice versa).

XL spring return actuators are easily field modified to suit changing plant air and/or valve fail mode requirements.

Many of the XL actuators can have end cap modules added that provide a declutchable, manual override.

Hytork's unique On-Line Test module for ESD valves can be added to all XL spring return actuators.

All XL actuators feature the new "star" pinion drive, providing greater flexibility for direct or bracket mounting to an increased range of valve designs, including valves that have an ISO 5211 design with the stem turned at 45 degrees.

All Hytork XL actuators are manufactured to the latest international interface standards: ISO 5211, NAMUR and VDI/VDE. These standards assist efficient and accurate assembly of automated packages.

Additional Hytork XL features

- Extra mounting holes for top and bottom mounted accessories (including Hytork's direct mount interface for butterfly valves).
- Extra mounting holes near NAMUR solenoid valve pad to facilitate filter/regulator bracket installation.
- Hytork's unique direct mount interface for the most popular, non ISO 5211 designed butterfly valves.
- Stainless steel coupling inserts for direct mount ISO 5211 valves and other popular valve stems.
- Site proven DURASTRIIP bearings protect all moving parts for guaranteed high cycle life.
- Change a solenoid or positioner, adjust a switch, alter a spring rating or install a new set of bearings and seals (never a spring set) in just minutes.
- A rugged, heavy duty body casting, patented SAFEKEY, unbreakable springs and HYTORK'S safety retractor bolt system for disassembly of spring return actuators.

These and other Hytork features:

- reduce capital, assembly and installation costs
- increase personnel and plant safety
- increase plant up time
- reduce maintenance costs
- extend the package life

Complete Solutions with Hytork's XL

HYTORK can supply complete customized packages tailored to suit the individual customers' needs and plant application requirements.

In addition to the many features that the XL offers, HYTORK's Complete Solutions package can also provide the following benefits:

- Full engineering and GA drawing capability in each sales office
- Standard, non-standard and special application equipment.
- A guaranteed rapid response to enquiries and orders with many items stocked locally to ensure a same day service if required.
- Short lead times facilitated by a global distribution network, backed up by a massive stock of process control equipment.

The XL Commando for aggressive corrosive environments

The XL Commando is treated with Fluoropolymers from the Hytork CG range to give maximum protection against corrosive attack. Years of field

trials have proven this complete durable impregnation of all body parts (inside and out) to be the answer to many corrosive environments.

The XL manual override

A simple end cap assembly exchange provides an efficient, compact, light-weight manual override for many XL models. No modification is required to valve brackets and couplings, and torque losses are eliminated. Various handwheel designs can be fitted to suit customer requirements.

XL star drive pinions and stainless steel adapters

All Hytork XL pinion drives are manufactured to ISO 5211. Hytork's "star" drive provides additional flexibility and simplicity in valve/actuator mounting. A range of stainless steel pinion drive adapters allows many valves to be close mounted for a compact, low cost package.

The XL On-Line Test unit

Hytork's On-Line Test module permits testing of Emergency Shut Down (ESD) and other important valves, solenoids and switches without upsetting the process.

- Each ESD unit can have its own interlocking device to ensure only that particular tag number is tested at any one time.
- ESD units can be retrofitted to existing HYTORK actuators and to any HYTORK automated quarter turn valve.
- HYTORK can also provide On-Line Test units to replace any other manufacturers' actuator and cater for individual plant requirements or special requirements for interlocking.

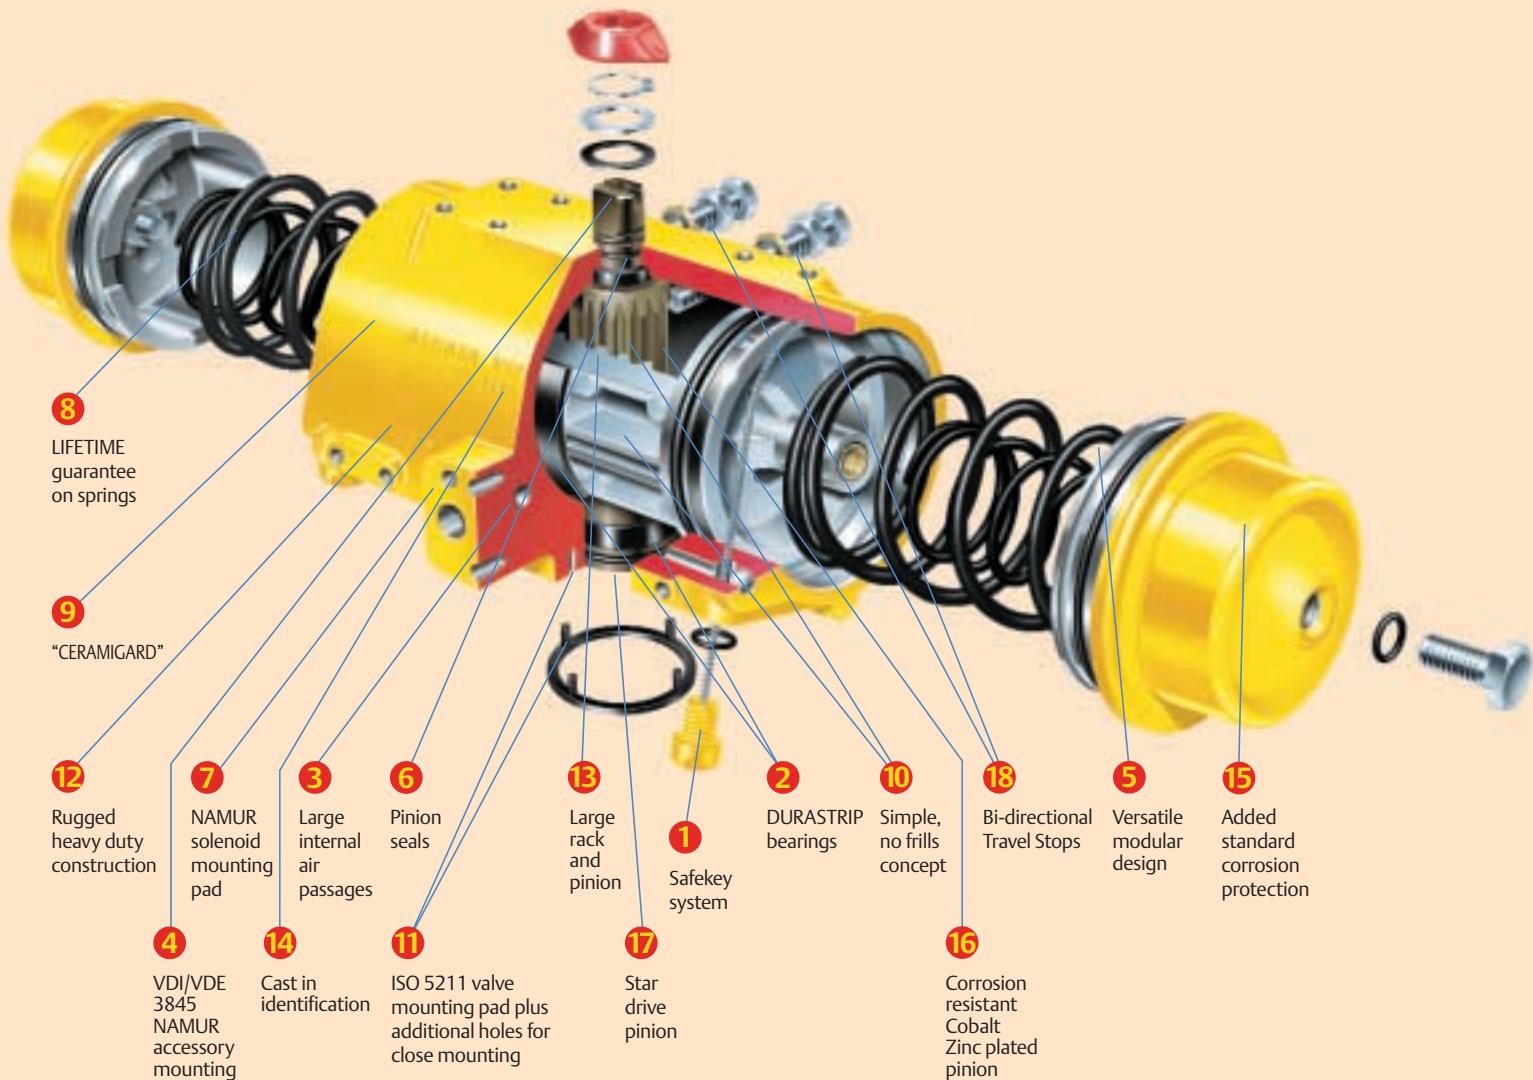

XL Actuators Materials of Construction

Model Numbers	Component Description	Material	Qty
XL26-XL4580	Ball Bearing	High Carbon Chromium Steel	2
XL26-XL4580	Sealing 'O' rings	Nitrile Rubber (Optional: Viton, EPDM or Silicone)	10
XL26-XL221	Bearings (Piston & Pinion)	Acetal M90	6
XL280-XL4580	Bearings (Piston & Pinion)	MoS2 Impregnated Polymer	4
XL26-XL221	Steel Thrust Washer	Stainless Steel	1
XL280-XL4580	Steel Thrust Washer	Steel, Zinc plated	2
XL26-XL4580	Durastrip Thrust Washer	MoS2 Impregnated Polymer	1
XL26-XL4580	Circlip	Spring Steel, Zinc plated	1
XL26-XL221	Position Indicator	Nylon	1
XL280-XL4580	Position Indicator	Polypropylene	1
XL280-XL4580	Body	Aluminium, Ceramigard Treated and Two Pack Epoxy Coated	1
XL26-XL4580	SAFEKEY Head	Composite	
XL26-XL4580	SAFEKEY Wire	Stainless Steel	2
XL26-XL221	Thread Insert (Piston)	Steel, Zinc Plated	2
XL26-XL221	Location Ring	Acetal M90	1
XL26-XL4580	Pinion	Steel Cobalt Zinc Plated	1
XL26-XL4580	Piston	Aluminium	2
XL26-XL221	End Cap	Aluminium, Electrophoretic Coated and Two Pack Epoxy Coated	2
XL280-XL4580	End Cap	Aluminium, Ceramigard Treated and Two Pack Epoxy Coated	2
XL26-XL4580	Grease	Lithium based (for Nitrile Rubber)	
XL26-XL1370	Travel Stop/Locking Nut	Stainless Steel	2
XL26-XL1370	Thread Seal	Steel, Zinc Plated/Rubber	2
XL425, 680, 1370, 2585 & 4580	*Retractor Cap	Steel, Zinc Plated	2
XL280 & XL1125	*Retractor Cap	Aluminium	2
XL26-XL4580	*Springs	Spring Steel, Electrophoretic Coated	2 or 4

*Spring Return Models Only

Actuator specification

- Pneumatic actuators will be double rack and pinion design with bodies manufactured of cast aluminium alloy.
- All moving parts, piston racks and pinions will be fitted with replaceable wear bearings to resist cylinder side loads, radial pinion loads and up thrust/down thrust pinion loads.
- Actuators will have two rotational travel stops, acting on the rotating pinion, providing 10 degrees of travel adjustment in both directions of pinion rotation, and will have a minimum total rotational capability of 96°.
- Actuators will be designed to the preferred ISO mounting and drive dimensions, have ISO and VDI specification mounting pads for accessories with a NAMUR accessory drive on the pinion top and a NAMUR specification solenoid mounting pad.
- Actuators will have a ceramic like finish on all body parts and will be coated with a two-part epoxy paint for corrosion resistance.
- Spring return actuators will have a maximum of two springs per end cap, and will have a lifetime warranty against spring breakage.
- End caps will be securely attached to the actuator body using a flexible, stainless steel key in a machined key way.
- Suggested manufacturer and model number is HYTORK XL SR series for spring return and HYTORK XL DA series for double acting.

XL Actuator

1 Safekey system

This patented Safekey method of end cap assembly to the actuator uses a patented flexible stainless steel key in an internal machined keyway. The Safekey is completely sealed from all external contamination.

Stronger than conventional bolting, more secure than Helicoils™, the Safekey system eliminates stress concentrations caused by point loading.

Safekeys cannot be removed when the XL actuator is pressurized or springs are not safely contained, eliminating potentially dangerous disassembly.

2 DURASTrip bearings

All moving parts are protected by permanently lubricated, long lasting DURASTrip bearings that extend the actuator's life in the most severe and demanding conditions.

3 Large internal air passages

HYTORK's extra large internal air passages permit maximum speed of operation and greatly reduce the possibility of the air passages blocking.

4 VDI/VDE 3845 NAMUR accessory mounting

(an international standard)

This standard includes a slotted drive in the top of the pinion, providing a self centering, positive, no slop drive for top mounted accessories. All switches, positioners, etc. manufactured to the VDI/VDE standard, can be directly driven by the actuator pinion, eliminating expensive couplings. Hytork's standard visual position

indicator, snaps on to this pinion design. This “standard” mounting pad simplifies the addition of all “state-of-the-art” top mounted accessories. Using HYTORK’s engineered “SAFEMOUNT”, ANY accessory made to the VDI/VDE standard can be mounted to the actuator or one can still nipple mount a solenoid valve in the tapped hole. The choice is yours.

5 Versatile modular design

Customize the Hytork actuator to fit your needs. Hytork’s modular design permits shop or field changes in action (double acting or spring return), fail position, spring rating, manual override requirements, plus testing and locking devices.

6 Pinion seals

Pinion seals are positioned as close to the external surfaces as possible to minimise any crevices for maximum protection against corrosion.

7 NAMUR solenoid

mounting pad (an international standard)

This permits a choice of various manufacturers’ solenoid valves to be direct mounted to the actuator. A single solenoid can be used for all double acting and spring return sizes. Hytork’s “CATS” direct mounted solenoid valve prevents aggressive ambient air from entering the spring chambers. In addition to the NAMUR holes many sizes of the XL actuator range are also provided with four additional holes to assist attaching brackets for filter regulators and solenoid valves that cannot be direct mounted.

8 LIFETIME guarantee on springs

Put the SAFE in Fail Safe! HYTORK’s springs are designed and manufactured never to break, and are then protected from corrosion using an electro-phoretic finish. Springs are rated to compensate for “spring set” for true fail safe confidence. Hytork springs are guaranteed for life and backed by a FREE complete actuator replacement. Hytork springs can be matched for any air supply pressure and valve requirement - easily and safely.

9 “CERAMIGARD”

The body has a unique surface finish of Di-aluminium Tri-Oxide (Al₂O₃); a hard, corrosion resistant ceramic like surface, protecting all body parts against wear and corrosion.

10 Simple, no frills concept

Only three moving parts; one pinion, two pistons.

11 ISO 5211 valve mounting pad (an international standard) plus additional holes for close mounting

Hytork XL actuators are all provided with ISO 5211 mounting holes. Many sizes have two ISO 5211 hole patterns plus additional holes outside the ISO pattern. These two hole patterns provide flexibility in mounting to all types and makes of quarter turn valves, whether they are ISO 5211 or not. The outer mounting holes, coupled with HYTORK’s optional, low cost mounting subplates, allow the close coupling of most makes of valves that are not ISO 5211.

12 Rugged heavy duty construction

The XL body designed as industrial grade and made from a heavy duty casting to provide maximum protection against dents, shock or fatigue.

13 Large rack and pinion for precision modulating control applications

The extra large, precision rack and pinion reduces “dead band” for accurate modulating control applications.

14 Cast in identification

Model numbers, port identifications, ratings, foundry trace and safety instructions are cast in for permanent readability. No lost identification due to weathering or paint.

15 Added standard corrosion protection

A long heat cured, two part epoxy surface treatment is standard, providing extra protection against aggressive environments.

16 Corrosion resistant Cobalt Zinc plated pinion

All Hytork actuator pinions are Cobalt Zinc plated. This durable treatment shows no signs of corrosion after over 2000 hours in a salt spray test.

17 Star drive pinions and new stainless steel adapters

All Hytork XL pinion drives are manufactured to ISO 5211. Hytork’s new star drive provides additional flexibility and simplicity in valve/actuator mounting. Optional star drive sizes are available. A range of stainless steel pinion drive adapters allows many valves to be close mounted for a compact, low cost package.

18 Bi-directional Travel Stops

XL26 - XL1370

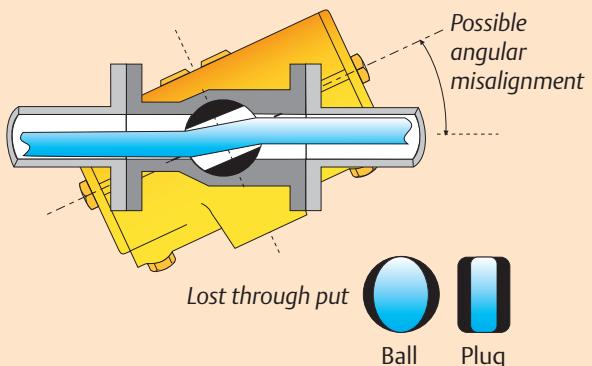

- 1 A unique, exclusive standard provides rotational adjustment on the actuator pinion, in both directions of travel.
- 2 High performance and special duty valves require precise and specific rotation limits to perform their intended function.
- 3 Metal seated and high performance butterfly valves need exact rotation stopping between 0° and 7°.
- 4 Rubber seated butterfly valves often require stopping between 0° and 7° after installation, for optimum seat life. These valves can experience premature seat failure if the disc is forced into the seat.
- 5 Full port and metal seated ball valves need exactly 0° and 90°.
- 6 All manufactured items have acceptable tolerances. When the tolerance of the components of an automated valve assembly are added, the actuator must provide compensation by being able to rotate more than 90° with overtravel in both directions, and then continually stop precisely at the required position.
- 7 Hytork actuators, with patented two way rotation travel stops, provide a minimum rotation of -3° to +93° and positive, adjustable rotation stopping (10° at each end).

- 8 This unique Hytork combination assures positive sealing, correct port alignment and long life for all valve designs.
- 9 Single end cap stops and dual end cap stops cannot limit rotation when the actuator pistons are driven together (as in all "fail" strokes) and provide no function. Actuators without sufficient overtravel, in both directions of rotation, cannot assure correct valve functioning.
- 10 Overtravel and Rotation Travel Stops are required to compensate for the accumulation of tolerances that lead to valve malfunction and damage.

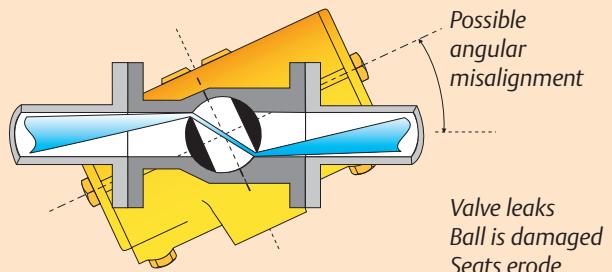

XL2585 - XL4580

On the larger sizes of Actuators the adjustment is obtained by the addition of a simple Stop Block that fits under the Actuator. The Actuator is manufactured with over travel to give -3° to +93° of movement and the bottom mounted Stop Block provides the required adjustment of 10° at each end of the travel.

Note: A minimum safety factor of 20% must be added to the actual valve torque before using these charts. When emergency shut down or infrequently used valves are being sized, additional safety factors may be required due to potential increases in the valve torques. If in doubt, or you require any assistance with sizing actuators, please contact HYTORK.

Note: A minimum safety factor of 25% must be added to the actual valve torque before using these charts. When emergency shut down or infrequently used valves are being sized, additional safety factors may be required due to potential increases in the valve torques. If in doubt, or you require any assistance with sizing actuators, please contact HYTORK.

HYTORK products and services

In addition to the XL actuator range Hytork can also offer valve sizing, valve package assembly and engineered solutions to suit all your quarter turn valve automation requirements, available at our Valve Automation Centers.

For details on any of these products and other services please contact HYTORK or your local distributor, or visit our website.

Hytork also manufacture a range of accessories including VDI/VDE engineered accessory mounting kits, switches, solenoid valves, positioners and manual override gearboxes to fit all Hytork actuators.

The XL Series of rack and pinion actuators has twelve (12) sizes in Double acting and Spring return versions with torque outputs up to 35,000 inch.lbs Double acting.

Mounting kits for all types and makes of quarter turn valves are also designed and manufactured by HYTORK.
